

Fravizel is an engineering company with 37 years of activity, which develops machinery and equipment (more than 300 types) for stone quarries, factories, and mines. We manufacture all types of equipment necessary for sustainable work in stone quarries, factories and mines. We develop cutting and drilling machines, buckets, rippers, stone splitting machines, etc. Our equipment is aligned with the dynamics of the circular economy. Our focus is on increasing production, energy efficiency and the sustainable use of natural resources. We make your job easier by customizing the products to your needs.

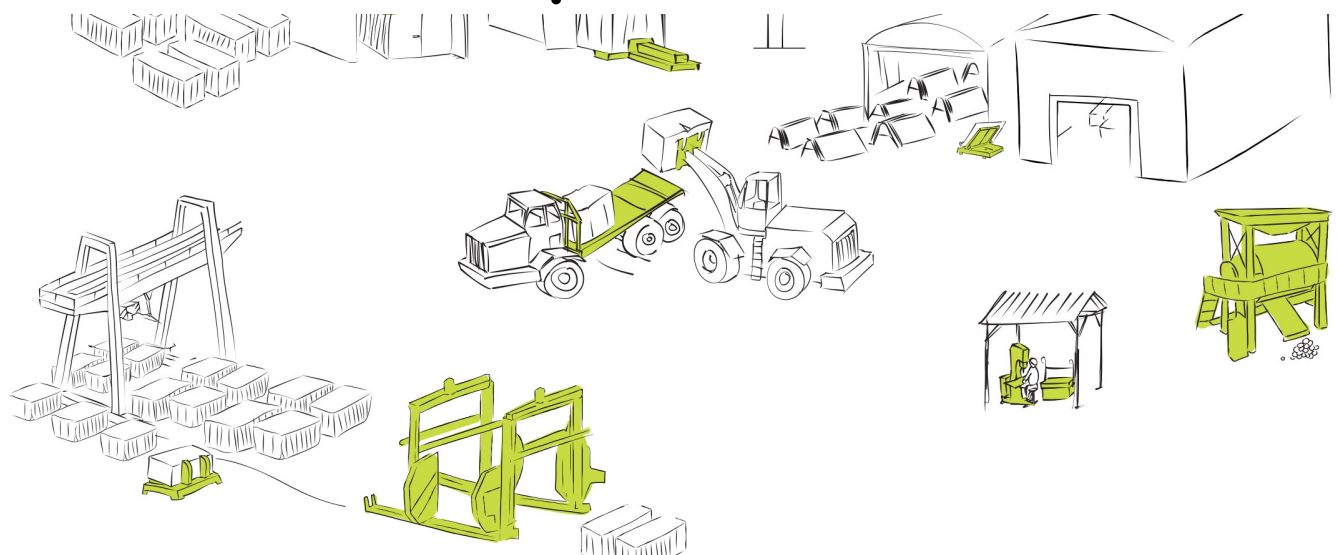

Innovation and Export Data:

- Exported to more than 50 countries and maintains international relations with 141 countries;

- Belongs to COTEC's innovation network (one of the first metal-mechanics to belong);
- Focused on circular economy and increased energy efficiency;
- Approximately 30 patents at national and international level;
- More than 30% of Manpower with higher education.
