

MVC - Portuguese Limestones, is based in the heart of the limestone exploration in Portugal, (owning 9 quarries), dedicating its activity to the transformation of stones.

The company is equipped with the most modern technology for the transformation of limestone and is also associated with extraction companies, which gives us a great production capacity and more rigorous production control, allowing us to respond to the demands of both the national and international market, either in terms of quantity, quality, and deadlines.

Number of Employees: 36

Volume of Exports: 80%

Energy Production

MVC has a photovoltaic plant that produces 34% of the energy consumed, avoiding the release of 70 tonnes of CO2 each year.

Transformation Waste

In order to make the most of processing waste, MVC is working with various universities and research centers to develop new materials and processes that enable the creation of new products.
